

For Active Dogs!

Brought to you by Canine Sports Productions

Coaching dog enthusiasts to embrace the unique needs of active dogs through teaching, mentoring and educational media

VOLUME 2 | ISSUE 4 | March 2019

Scents of Success

The **extraordinary olfactory abilities of dogs** have long been used by humans for odor identification and discrimination. Our use of this **incredible canine tool**, which we are completely unable to imitate or engineer, is continuously expanding. **We deploy the canine nose for life-and-death activities** such as improving our safety (e.g., bomb and drug detection, tracking lost individuals, avalanche work) **and our health** (e.g., cancer detection, diabetes/seizure alert). We also use the dog's exceptional scenting ability **for recreation** as we hunt game and play novel games involving scent detection (e.g., nose/scent work, utility obedience, tracking, hunt tests/field trials).

Given the **importance of the dog's superlative schnoz**, it's important to understand **what factors might alter its function**. What about physical stressors such as exercise, conditioning, diet and environment?

Several studies provide important information about **what dogs need to be at their scenting best** and reveal clues about **how we can optimize olfaction!** [Check it out!](#)
